

Inflammatory Bowel Disease

Ghobad Abangah

Associate Professor of Gastroenterology and Hepatology

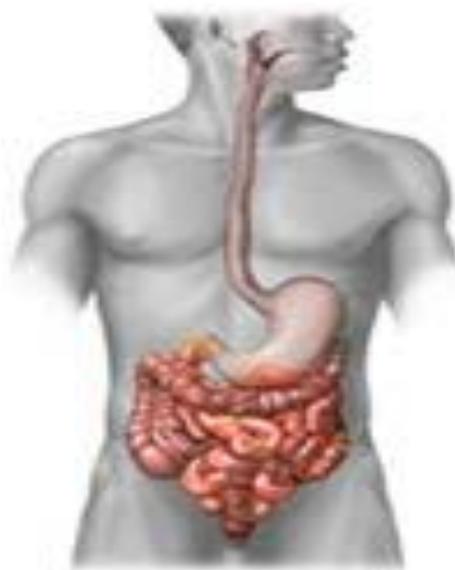

School of Medicine

Shahid Mostafa Khomaeini Hospital

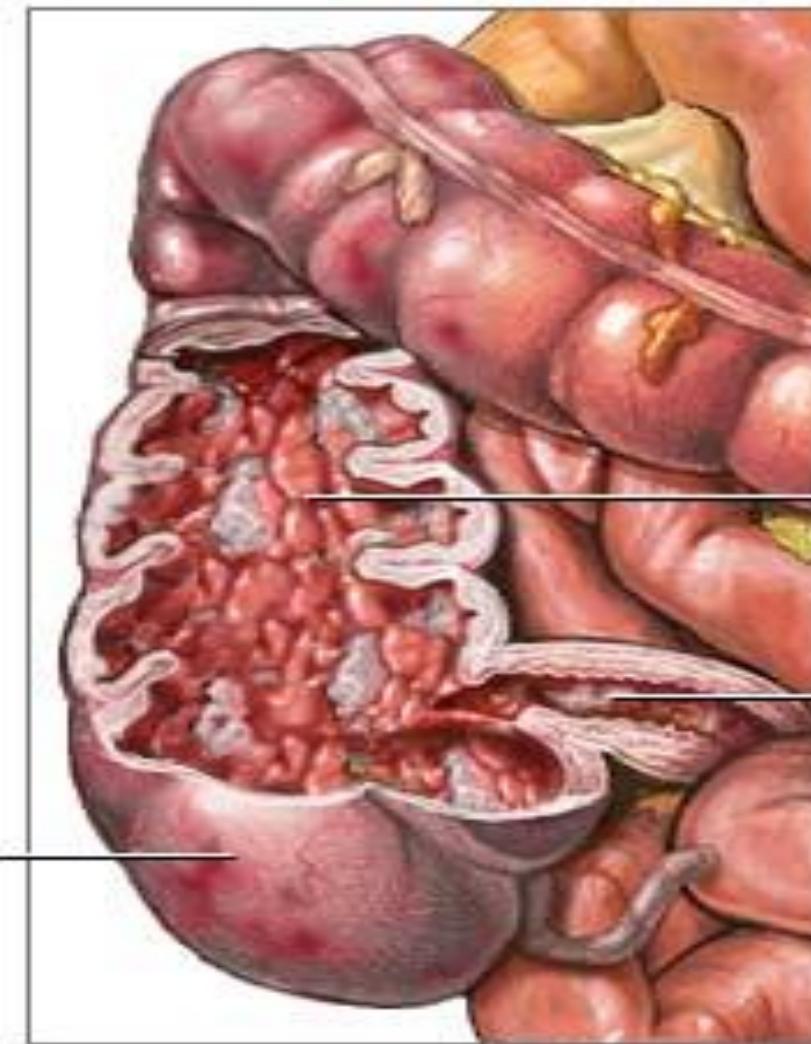

Ilam University of Medical sciences

Liver cirrhosis

Inflammatory bowel disease

Cecum
portion
of large
intestine

Inflammatory
bowel
disease (IBD)

Ileum
portion
of small
intestine

	Ulcerative colitis	Crohn's disease (regional ileitis)
Site	Almost always involves Rectum (95%) & Descending colon / Sigmoid	Any where in GIT, Commonest in ILEUM Rectum often spared
A/-	Unknown	Unknown, ? vasculitis
		Smoking 3 X ▲
	1^o Siblings= 15 X	1^o Siblings= 15 X
	Mucosal immunological	Auto-immune
	Weakened mucosal barrier	TH receptor
	Defective mucosal metabolism of butyrates	? Variant of TB

	Ulcerative colitis	Crohn's disease (regional ileitis)
	pANCA	ASCA
		CARD15 gene (also known as the NOD2 gene)
	T _h 2 cytokine response	T _h 17 cytokine response
		opiate receptor antagonist Naltrexone (also Low-dose naltrexone)
		TH receptor
		activation of the CB1 and CB2 cannabinoid receptors
	Defective mucosal metabolism of butyrates	? Variant of TB

	Ulcerative colitis	Crohn's disease (regional ileitis)
Etiology		Ankylosing spondylitis
		Chromosome 16 IBD 1 locus= NOD2 gene
		40X incidence when allele variants of NOD 2 gene on both chromosomes

	Ulcerative colitis	Crohn's disease (regional ileitis)
Site	Almost always involves rectum & Descending colon / Sigmoid	Commonest in Ileum 60% <u>Rectum often spared</u> Anal lesions are common

Patho	Ulcerative colitis	Crohn's disease
Gross	<ul style="list-style-type: none"> -only the mucosa involved -superficial ulceration -Exudation -pseudopolyposis 	<ul style="list-style-type: none"> -Inflammation involve full thickness of bowel wall involving the serosa -Cobble stone -deep fissured ulcer -LN enlarged -Fistula -Skip areas
Micro	<ul style="list-style-type: none"> -Crypt abscess common -Inflammatory polyps -Highly vascular granulation tissue Crypts are reduced in # Crypts appear atrophic= pipe stem colon 	<ul style="list-style-type: none"> Crypt abscess rare Non caseating giant cell granuloma present in 60%

Normal colon

Ulcerative colitis

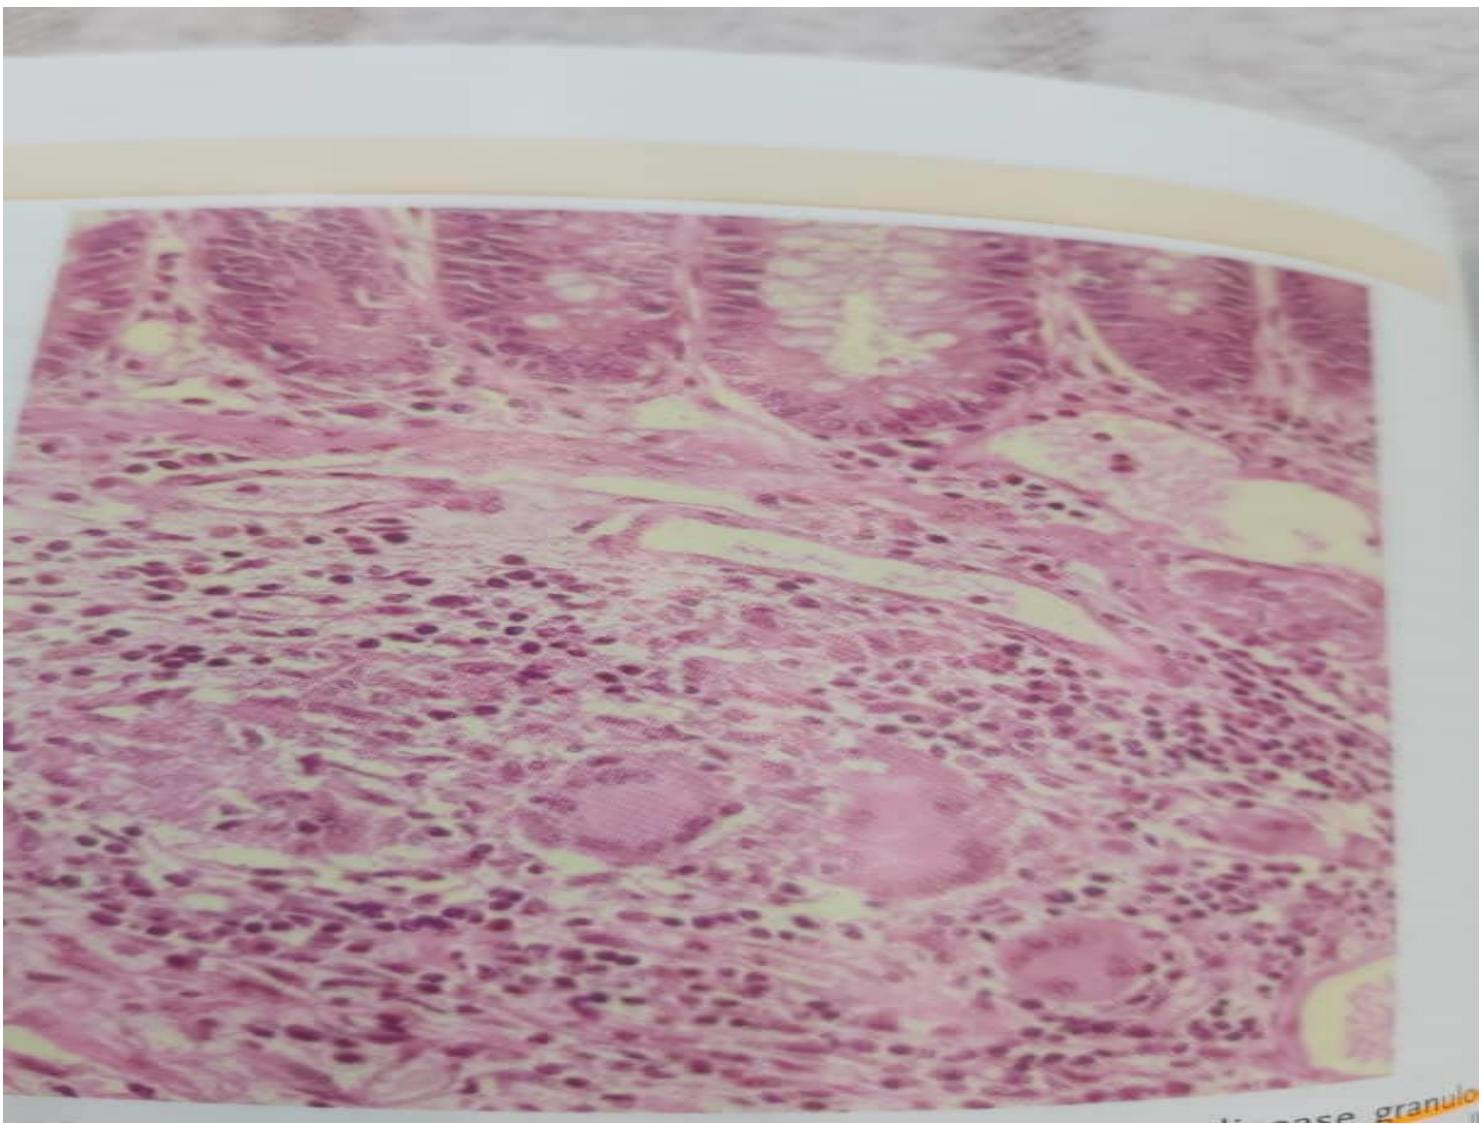

affects
mucosal
layer
only

goblet
cells

absence of
goblet cells

distortion
and abscess

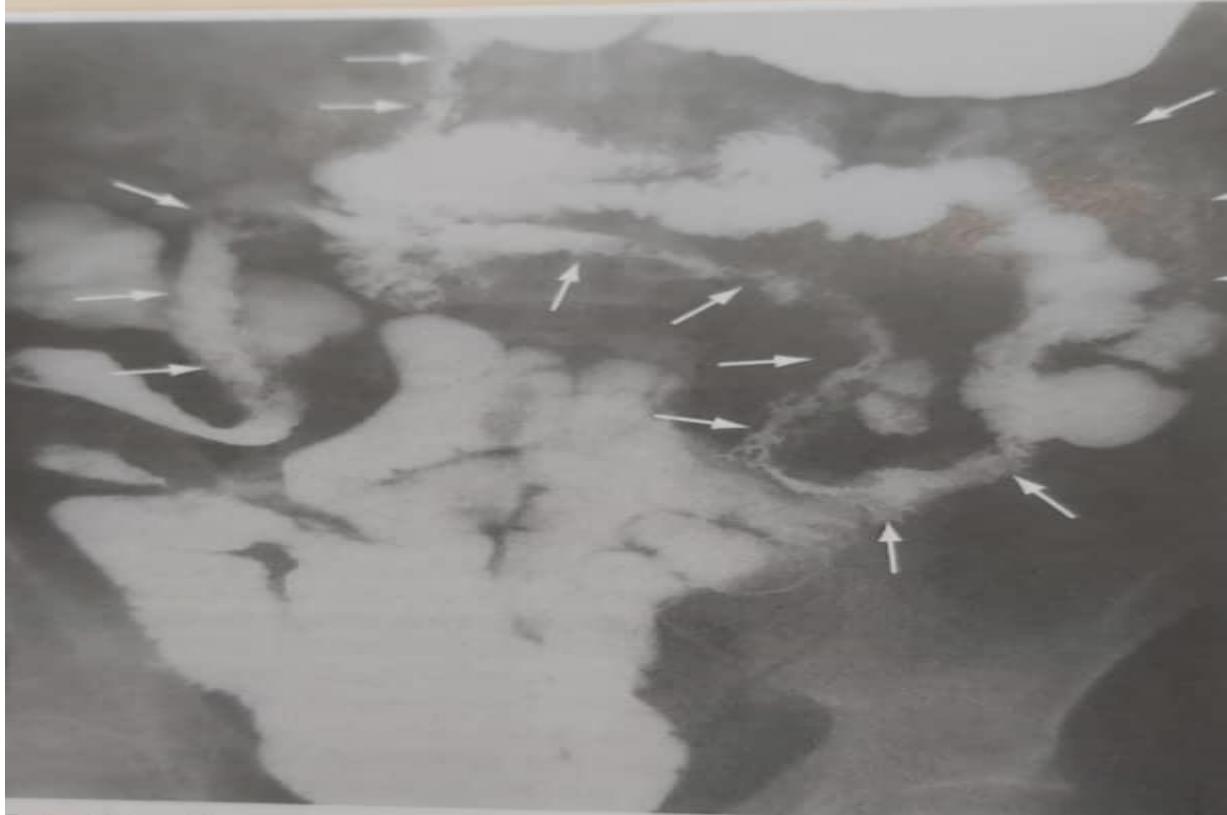

Crohn's disease (transmural)
but its major value is still to help evaluate and
guide therapy of perianal disease.^{176,177} Doppler vascular

Figure 111-6. Magnetic resonance enterography with gadolinium contrast agent in a patient with Crohn's disease. This coronal view shows mural hyperintensity, mural thickening, and the comb sign (engorged perienteric vascularity) involving the terminal ileum. The vessels are seen to the left of the inflamed loop and resemble the teeth of a comb. (Courtesy of Dr. E. Loftus and Dr. Jeffrey Fidler, Rochester, Minn.)

Section X Small and Large Intestine

1-4. Films from an upper gastrointestinal series and small bowel follow-up are noted (arrows), with a classic cobblestoned appearance of the bowel that demonstrates a string sign in the right lower quadrant. The classically spaced bowel loops is a result of spasm and edema associated with the ileus. This usually resolves with administration of glucagon, which relieves smooth muscle spasm.

use 80%, BPP accuracy 9000/100

The safety of radiation

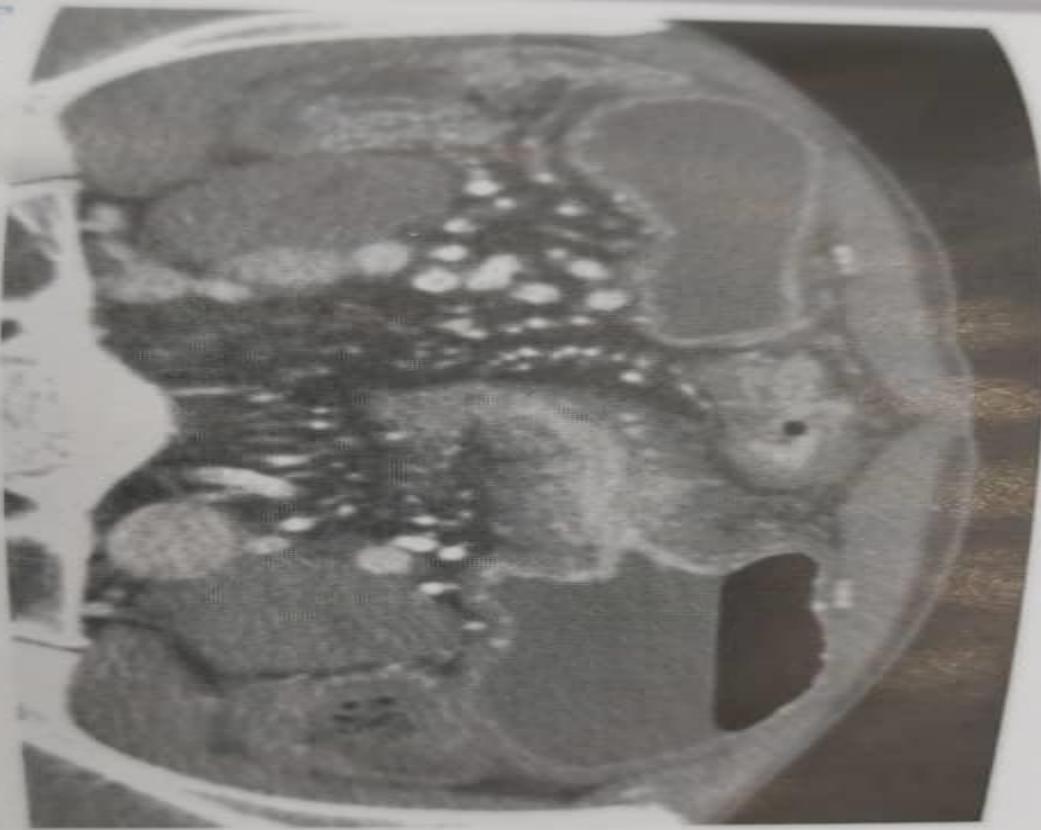

Figure 111-5. Computed tomography enterography in a patient with Crohn's disease. Note the multiple dilated bowel loops.

Figure 111-6. Magnetic resonance enterography in a patient with Crohn's disease. Note the wall thickening, mural enhancement, and fistulae.

	Ulcerative colitis	Crohn's disease
Clinical feature	<ul style="list-style-type: none"> -Watery or bloody diarrhea -Rectal discharge of mucus -Proctitis -Lt sided & total colitis 	<ul style="list-style-type: none"> -Chronic diarrhea -Abdominal pain -Food fear wt loss -pyrexia -RIF pain (?? Appendicitis) -as abdominal mass -acute intestinal obstruction -multiple perianal fissures, fistula & abscess

	Ulcerative colitis	Crohn's disease
Clinical feature	Toxic megacolon Fulminating colitis Perforation Severe hemorrhage	Intra-abdominal fistula <ul style="list-style-type: none"> • Entero-enteric • Entero-cutaneous
Severity	Mild Moderate Severe	Complex anal fistula DD TB

	Ulcerative colitis	Crohn's disease
Clinical feature		Fat wrappings
	TH 2	TH1 TH 17

	Ulcerative colitis	Crohn's disease (regional ileitis)
Extra-colonic manifestation	<p>1-Arthritis.</p> <p>2-skin disorder- erythema nodosum, pyoderma - gangrenosum.</p>	<p>1-Peripheral Arthritis, Ankylosing spondylitis, Sacro-ilitis</p> <p>2-skin condition- erythemanodosum, pyoderma gangrenosum.</p>

	Ulcerative colitis	Crohn's disease
Extra-colonic manifestation	<p>3- Eye disease- Iritis</p> <p>4-Bile duct cancer</p> <p>5-Sclerosing cholangitis</p> <p>6-Hepatic disease</p> <p>7-Urology- Nephrolithiasis</p>	<p>3- Eye disease- Iritis</p> <p>4-Bile duct cancer</p> <p>5-Sclerosing cholangitis</p> <p>6-Hepatic disease</p>

	Ulcerative colitis	Crohn's disease (regional ileitis)
Investigation	<ul style="list-style-type: none"> -CBC -stool culture -plain film of abdomen -Barium enema -sigmoidoscopy -colonoscopy -biopsy 	<ul style="list-style-type: none"> -small bowel enema - Ba Enema -sigmoidoscopy -colonoscopy -biopsy

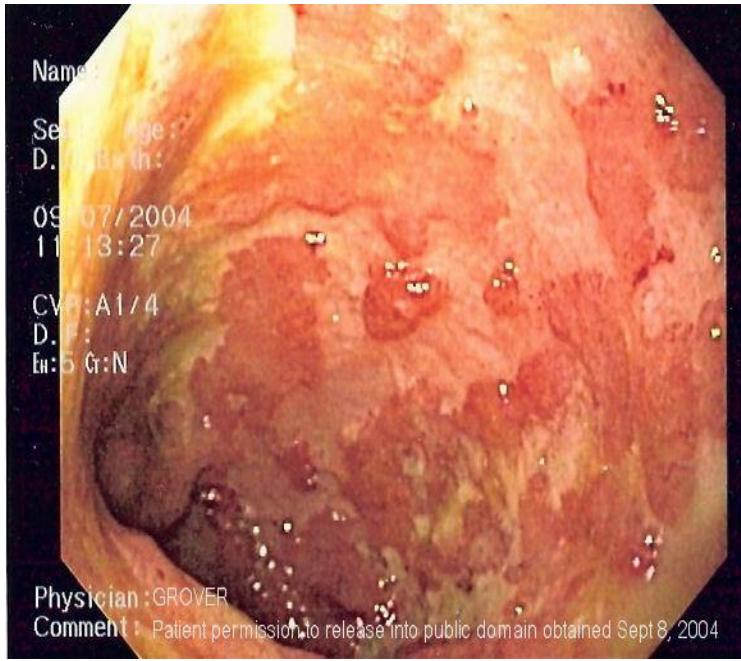

Ulcerative colitis. Double-contrast barium enema study shows pseudopolyposis of the descending colon

Crohn's disease
(regional ileitis)

Contrast

- String sign of Kantor
- Sterlien's sign
- Fleischner's sign

- Endoscopic image of **ulcerative colitis** affecting the left side of the colon. The image shows confluent superficial ulceration and loss of mucosal architecture

Crohn's disease
(regional ileitis)

Rx	Ulcerative colitis	Crohn's disease (regional ileitis)
	<p>1-sulfasalazine.</p> <p>2-azathioprine in resistance cases.</p> <p>3-steroids:</p> <p>Topical (Predsol enemas)</p> <p>Oral(30 – 40mg prednisolone)</p> <p>4-high-fiber diet & bulk forming agents as methylcellulose.</p>	<p>1-Sulfasalazine.</p> <p>2-Azathioprine in resistance cases.</p> <p>3-Steroids</p> <p>1-supplementary diet.</p> <p>2-elemental diets</p> <p>3-supplement of oral iron.</p> <p>4- TPN</p> <p>6- Metronidazole/ Antibiotics</p>

Rx	Ulcerative colitis	Crohn's disease
	Sulfasalazine	INFliximab=MAB against TNF-α for Internal Fistula
	Azathioprim	Elemental diet, TPN
	Steroids-Topical	Sulfasalazine
	Steroids-Oral	Steroids
	high-fiber diet & bulk forming agents as methylcellulose	Metronidazole.

Rx	Ulcerative colitis	Crohn's disease (regional ileitis)
	<p><u>Surgical:</u></p> <p>-indication</p> <p>Panproctocolectomy + permanent ileostomy</p>	

	Ulcerative colitis	Crohn's disease (regional ileitis)
Complication	<ul style="list-style-type: none">-Fulminating colitis & toxic dilatation (mega colon)-perforation-sever hemorrhage	<ul style="list-style-type: none">-stricture Rx-adhesion Rx

Vienna Classification of Crohn's

- ***Age at diagnosis***
A1, <40 years
A2, ≥ 40 years
- ***Location***
L1, terminal ileum
L2, colon
L3, ileocolon
L4, upper GI
- ***Behaviour***
B1, non-constricting nonpenetrating
B2, stricturing
B3, penetrating

Cancer risk in UC

- 3.5%
- 20y=12%
